The moment of digital reindustrialisation is the claim of the '33rd Edition of The Digital Economy and Telecommunications Summit'. We will analyse in depth the impact of digital transformation on the reindustrialisation of Spain, considered as both, a fact and an opportunity that affects all public and private sectors and the lives of citizens and consumers. During the event, we will address the technological landscape and the creation of new multisectoral ecosystems in the short, medium and long term. Besides, we will look at the present and future demands shaped by the new business opportunities for the Spanish industrial and digital sector represented by AMETIC.

The Summit will gather senior representatives of the administration and Spanish and European public bodies; top executives of leading technology companies; research centers; and academia. This group of renowned speakers will present their thoughts and opinions on the evolution of the sector and future trends.

Therefore, #Santander33 became one of the most important events of the ICT annual calendar in Spain. The main stakeholders of the digital industry will come together contributing to make this event a first-class professional conference with unlimited opportunities.

We must remind the academic dimension of the event. With the continued support of the Menéndez Pelayo International University (UIMP), the event is included as an official course of the educational annual calendar. Should you be interested in obtaining the certificate (equivalent to a module of 18 teaching hours), your attendance must be higher than 85% of the total of the course.

Various aside events will occur during these three days such as the networking cocktail and the closing lunch. In addition to this, a gala cocktail will be offered on Monday, in which AMETIC will present the 'Award for the boosting IT Spanish Company 2019'.

Like in all previous editions, the event will be broadcast live and widely disseminated on social media.
